

2008 Business Updates

V-2008-02-09

This months "Tech Tip" (attached) Archiving

We are starting off with two files IT and GL. The archiving process will assist in creating more available space and speed to retrieving current data in these files. The instructions and process attached will work on CCBDX and CCERP applications release 3.0 and higher. When reviewing the documents if you have any questions or concerns please be sure to consult with OHM IT before proceeding. Other archiving tips and procedures will be made available and include live retrieval for files such as invoices, sales order and purchasing.

IBM database news: Improved UniVerse Help is Coming

As of UniVerse 10.2.8 IBM group is pleased to announce that they are rolling out a new, improved help functionality that is accessible from the TCL command line with the new UVHELP command. UVHELP is linked to the documentation and will be updated with each release based on the current documentation.

UVHELP also has an improved user interface while retaining the functionality of the original HELP command. The original HELP command will remain in the product for backward compatibility but has not been updated for many years and will not be updated going forward.

POINT of SALE Processing

Over the last four years of trade shows some of our industry clients have requested information on Point of Sale (POS). This is different from that of the OHM R.E.A.L internet 24X7 module for online information, order entry and other functionality. Some of our manufacturing clients have ventured out to their own retail stores. In two weeks at the ISPA show in Baltimore we will be featuring an OHM client POS solution. The OHM client used OHM's WADE development tools to redo their telnet application in web-centric environment. They are successfully using the POS system in conjunction with their back end full business application of which the POS system interfaces to. The POS includes the credit card processor, bar code readers, full invoice print or receipt print attachments. Drop us an email if you are interested in learning more about this POS system even if you are not attending the ISPA trade show.

80 days and counting.... OHM MAY USER GROUP MEETING.....Calling all clients

This meeting is for you and about you. Be there to see what is now and coming.
Be part of your investments growth to the next technology leap!
